### PLANT CARE TIPS

September 01, 2023

01

## Watering

Water is necessary for photosynthesis, which is how plants use energy from the sun to create their own food

## Temperature and Humidity

By keeping the humidity in the greenhouse and around the plant at the right level, the plant will be able to keep its stomata open

02

## Lighting

All plants require light for photosynthesis, the process within a plant that converts light, oxygen and water into carbohydrates (energy)

03

## Fertilizing

The role of fertilizers is to increase yield and ensure healthy produce by supplying the right balance of nutrients to the soil.

04

## Pruning and Trimming

Removing the dead, diseased, and injured parts of a tree or shrub maximizes their vigor and aesthetic quality

05

aesthetic quantities.

Pests and Diseases

The study of plant diseases is important as they cause loss to the plant as well as plant produce

06

07

Soil Quality

Healthy soils produce healthy crops that in turn nourish people and animals. Indeed, soil quality is directly linked to food quality and quantity
